

ModusEsse – concluding concept paper draft 1

Opening	ModusEsse purpose is to provide a signal for the creation, dissemination and application of hard knowledge.
G	
James	A hard knowledge, decentralized technology framework, accessible to all.
Joseph	
Consensus	
Breakdown of parts	
Signal	
G	
James	<p>A guidance motivation for all beings to be connected with knowledge that will impact their world with the greatest certainty of cause and effect.</p> <p>Be bold and clear. A post money, post subject value 'pricing' mechanism that could lead up to full Doug Engelbart's vision and post that creation of a post human being(s).</p>
Joseph	
Consensus	
Hard Knowledge	
G	
James	Given a specific context, the application provides a universal outcome.
Joseph	
Consensus	
Creation	
G	
James	New theories/ideas behind a scientific model. Connection of being with different hard knowledge.
Joseph	

Consensus	
Dissemination	
G	
James	Decentralized technology protocol where mathematics provides the backstop of trust (no human subjectivity).
Joseph	
Consensus	
Application	
G	
James	Give the ability for any human to consume the knowledge or use other technology or humans or robots to perform or carry out the knowledge.
Joseph	
Consensus	
Calculation of Signal (see technical paper for details)	
G	
James	Puts forward an idea and then a gut feel on how to achieve this mathematically. The idea is that a universal algebraic probability calculation can be made based on the complexity of the hard knowledge know or unknown. Previous mathematics has shown how computation complexity can be measured given certain conditions. He believe such a computational mathematical framework can be discover and applied and thus making it at the heart of ModusEsse framework.
Joseph	
Consensus	
ADOPTION	
Opening	The ModusEsse project does not require all humans to participate. The key starting humans are those publishing scientific research and citizen science enthusiasts and

	those involve in the manufacturing of sensor for the former two categories of humans.
G	
James	
Joseph	
Consensus	
Scientific researcher	
G	
James	Wins by connecting better with other scientific research, higher Signal (essecoin) value better chance of increasing funding, better connect with wider citizen science community and access to their data.
Joseph	
Consensus	
Citizen Scientist	.
G	
James	There model of science will have to attain same level of 'hard' knowledge as the researchers
Joseph	
Consensus	
Sensor manufacturers	
G	
James	Application of 'hard' knowledge in terms of physical technology to provide better granularity of measurement to test theories against.
Joseph	
Consensus	
BEST EXAMPLE	

G	
James	<p>A sport scientific researcher in the field of muscle mechanics and recovery after exercise. Put forward a paper with idea of bio-chemistry mechanism of how cell deal with toxins built up during exercise. But scientist hypothesis and builds experimental framework e.g. blood measurement (lab with abc, cdf, etc sensor ie. Lab equipment), O2 levels in blood, activity measured by accelerometer and qualitative training programme. Recruits a local football team to provide data over 6 month period.</p> <p>Turns out there are a lots of sport citizen sport scientist out their measuring part of the sensors. They download the 'contract' i.e. computational model from the researcher and then run it with the sensor data they have. No meaningful results can be found but now a daily blood test is also available e.g thereons or add on to iphone. And by including this data, the researchers model is repeated.</p> <p>Now agreement on the model has been achieve, the next part is to get rid of the toxins post training or even while training.</p> <p>Another researcher on sport drinks gets notified by the esseCoin signal and put forward a theory, it gets applied and shared. Turn out it works of 34% of the humans in XYX context. (context being measurement, sensors, genome, manufacturing process of drink, time drink is taken etc.).</p>
Joseph	
Consensus	
FUNDING transition	
G	
James	<p>Get lucky is how the world currently works. I do not want to live on that basis. Combination of cash liquiaty fiat or crypto that allows me to live anywhere I want and devote all my time to ModusEsse.</p> <p>By 9th October, signed off on this conceptual document or agree a consensus will take more time or even unlikely to be achieved.</p> <p>Given agreement Pre-crowd funding base on idea and two white paper concluded by 31 Oct. 30 day crowd funding project conculed by 30th November.</p> <p>If success, set out road map for stage of ModusEsse full time commitment.</p> <p>If not. Then join either ethereum project or amiigo on a contract basis, worst outcome, first any work in London for 3-6 month to pay for 3month triop to Silicon Valley during 2015 where basis of cryptoIPO for modueEsse will be</p>

	finalized.
